NITROGEN TIRE FILL & DIAGNOSTIC WHEEL BALANCE WITH PRINTOUT

\$69.95

Nitrogen-Filled Tires

Why Nitrogen?

- Nitrogen molecules are larger than air molecules, therefore you will experience less tire leakage.
- Nitrogen is completely dry; removing condensation that can be adverse on rims.
- Nitrogen does not fluctuate in pressure with temperature.
- With 95% nitrogen content, optimal tire pressure lasts 3-4 times longer than just air.

Diagnostic Wheel Balance

What is Diagnostic Wheel Balancing?

- This technology matches where the tire should be mounted on the vehicle to solve balance and run-out-based vibration problems.
- This technology optimizes balancing ability by reading where the tire is to be placed on the rim.
- This equipment offers the highest level of accuracy available today in balancing and installing tires.
