

HALDIMAND MOTORS SERVICE DEPARTMENT

TRANSMISSION FLUSH & COOLING SYSTEM FLUSH

\$199.00

Why do a Transmission Flush?

Your transmission is like a large hydraulic pump. It uses transmission fluid to transfer engine torque to the drive wheels. This fluid deteriorates due to heat, contaminants and oxidation. Flushing and replacing fluid extends the life of your transmission.

Why do a Cooling System Flush?

When a cooling system is not serviced regularly, rust, scale and corrosion will accumulate inside the engine block, cylinder heads, radiator and heater core - restricting coolant flow and slowly eating away metals to cause parts failure.
